EDUCATION

SVKM's Dwarkadas Jivanlal Sanghvi College of Engineering <i>Bachelor of Technology, Computer Engineering, CGPA: 8.72</i>	Mumbai, India 2023 – 2027
Mount Carmel High School and Junior College <i>HSC: 83%</i>	Mumbai, India 2021 – 2023

WORK EXPERIENCE

Python and Cloud Dev Intern <i>GoChanakya</i>	Feb 2026 – Present Mumbai, India
- Built and maintained Python scripts to automate the daily collection and processing of mutual fund data from public financial registries such as the AMFI portal. - Migrated existing data pipelines from PythonAnywhere to Google Cloud Platform (GCP) using Cloud Run, Cloud Scheduler and Storage Buckets. - Developed event-driven data pipelines that merged incoming datasets, performed validation and transformations for automated storage in Google Cloud Storage (GCS).	
ML Research Intern <i>Veermata Jijabai Technological Institute</i>	June 2025 – July 2025 Mumbai, India
- Architected deep learning sequence models (LSTM, GRU, 1D-CNN) to forecast short-term indoor air pollutants (PM2.5, CO2) using the DALTON dataset. - Optimized model inference for edge devices by applying TensorFlow Lite Micro to reduce the overall model footprint by 61.5% (from 85KB to 32KB). - Achieved prediction errors of less than 10 $\mu\text{g}/\text{m}^3$ (MAE), outperforming baseline statistical models to enable reliable, low-latency remote environmental deployment.	

PROJECTS

AgenticAI Group Travel Planner — GitHub <i>LangGraph, Python, Docker, AWS EC2, Groq, Tavily</i>	April 2026
- Built a full-stack AI travel application to automatically generate personalized, day-by-day group itineraries complete with live map integrations and booking links. - Engineered a FastAPI and React system using LangGraph and Groq, coordinating 3 specialized AI agents to handle complex trip planning and real-time web searches. - Resolved conflicting user budgets and schedules by combining voting algorithms with LLM reasoning, delivering a transparent consensus across 7 distinct group preferences.	
MediBot: Medical AI Chatbot — GitHub <i>Flask, LangChain, Hugging Face, Groq, Pinecone</i>	March 2025
- Built a conversational RAG QA system to extract precise clinical context from unstructured medical documents. - Engineered a retrieval pipeline with LangChain, Hugging Face embeddings, Pinecone vector storage, and a Flask backend. - Reduced latency and delivered real-time, highly accurate responses by integrating the Groq inference engine.	

SKILLS

Languages: Python, SQL
Frameworks & AI Tools: PyTorch, TensorFlow, LangChain, LangGraph, Langflow, Hugging Face, Django, Pydantic
Libraries: Scikit-Learn, Pandas, NumPy, Matplotlib, Seaborn
Concepts & Databases: RAG Pipelines, Prompt Engineering, Vector Databases (Pinecone, Astra DB)
Deployment & Tools: Docker, FastAPI, Flask, Git/GitHub, AWS EC2

ACHIEVEMENTS AND EXTRACURRICULAR ACTIVITIES

- Solved 200+ questions on platforms including LeetCode and CodeChef as part of continuous practice and development.
- Served as Chairperson for an AI/ML committee (DJS Synapse) of 55 students, securing event sponsorships and streamlining operations.
- Organized the HackNiche 4.0 hackathon for 160+ participants and hosted an Agentic AI workshop for 40+ students
